### Abstract

A eyeglasses assembly with replaceable pad comprises a frame, a pad and lens. The frame and the lens form in one, and the frame has a nose-stand in the form of inverted V in the middle of eyeglasses assembly. The both sides of nose stand of frame has at least a pillar, respectively, connect to hole of frame. In the middle of pad also has an inverted V nose stand. The pad also has at least a flange. The nose-stand of pad connects to the hole of nose stand of frame, and so the flange of pad connects to hole of frame. Further, the invention provides a replaceable pad to combine frame or lens easily without any tool. Furthermore, the eyeglasses assembly of present invention is conveniently and pleasing to the eye for user.
